Set-Up Instructions:

1)Deploy CloudFormation Stack

a) Go **AWS CloudFormation** in **us-west-2 region**.
   i) Click "Create Stack" with new resource
   ii) Select upload template file (**template.yaml**) from **CloudFormation YAML File/** and click "**Next**".
   iii) Set stack name to "**cs79c-tax-calculator-engine**", check the IAM resource acknowledgment box at the bottom and click "**Continue**".
   iv) Wait 2-3 minutes until the status reaches "CREATE_COMPLETE".

b) Retrieve Endpoints:
   i) Open the Stack Outputs Tab.
   ii) Copy the generate "**ApiEndpoint**" (API Gateway /calculate URL)" and note the S3 bucket website URL

c) Configure and Upload the FrontEnd
   i) Open "script(.)js inside the Payroll Tax Calculator Frontend UI for S3 (website)/ and paste your API endpoint into the "**ApiURL**") variable.
   ii) Go to Amazon S3, open the newly created website bucket, click "Upload" and add the index(.)html, script(.)js, and style(.)css directly to the bucket root.

d) Verify Functionality
   i) Visit your WebsiteURL in any browser
   ii) Enter test values of grossPay: $500,000, pre-tax retirement deductions: $50,000 and click "Calculate" to confirm real-time results.
   iii) Check the Amazon DynamoDB console (PayrollTaxAuditLog) table then navigate to Explore Table Items to verify the transaction was logged.

e) Teardown (Post-Testing)
   i) In S3, select the website bucket, click empty, type "permanently delete" and confirm.
   ii) In CloudFormation, select "cs79c-tax-calculator-engine" and click "Delete".
